ncal.education@shrinenet.org

You will receive a registration form to complete and return with your registration fee.

Therapeutic Management of the Pediatric Burn Patient is a continuing education course for physical and occupational therapists. The purpose of the course is to promote the understanding of scars from a wound-healing perspective and identify therapeutic techniques that promote positive patient outcomes.

The course is presented by physical and occupational therapists specializing in care of the burn-injured child. At the end of the seminar, the learner will:

■ be able to describe the impact of wound healing and scar formation on long-term functional outcome
■ understand the core therapeutic interventions at all stages of burn recovery and the effect on outcome
■ understand how to advance and monitor a therapy plan of care as patients transition to outpatient
■ learn how to recognize burn sequelae and complications and understand the best options for management or follow up

Continuing Education
Shriners Hospitals for Children — Northern California is approved as a Recognized Continuing Competency Approving Agency, by the Physical Therapy Board of California. This course is approved for 3.75 continuing education units.
